Course summary

Course	Status	Completed	Score	Certificate
Core Engineering Concepts of TTM in New Zealand (TTM-ENG-01)	Not started	--	--	--
Working with Portable Traffic Signals (PTS-01)	**Completed**	26 Oct 2026	92%	SELA-PTS-01-20261026-AB12
Working Safely Near Barrier Systems (TTM-BBS-01)	In progress	--	--	--
NZGTTM Essentials (NZGTTM-01)	**Completed**	21 Oct 2026	88%	Pending review

Learning completed

Working with Portable Traffic Signals (PTS-01)

Completed 26 Oct 2026 · Score 92% · Certificate SELA-PTS-01-20261026-AB12 · Online, self-paced · 30 narrated slides in 5 modules

What was covered

- Module 1: Terminology and the regulatory framework, roles and responsibilities, and why the term is "portable traffic signals"
- Module 2: Equipment and signal head standards (AS 4191), types of portable systems, key components, and signals versus Stop/Go
- Module 3: Site assessment, placement and orientation, required signage, timing and phasing, vulnerable road users, and fitting the TMP
- Module 4: Daily inspection, monitoring during the shift, fail-safe behaviour, communication protocols, and incidents and near misses
- Module 5: End-of-works removal, records and documentation, and handover between shifts and crews

What the learner demonstrated

- Explains the compliance framework for portable traffic signals under AS 4191 and NZGTTM
- Checks that equipment and signal heads meet the standard before use
- Positions, signs and times an installation correctly against the TMP
- Operates, monitors and responds to a fault or fail-safe event during a shift
- Completes pack-down, records and a safe handover

Assessment: A self-check quiz at the end of Modules 1–4, 80% required to pass each one.

NZGTTM Essentials (NZGTTM-01)

Completed 21 Oct 2026 · Score 88% · Online, self-paced · approx. 15 minutes

What was covered

- Why temporary traffic management exists
- The transition from CoPTTM to NZGTTM
- What "risk" means in a TTM context
- Planning under the Risk Based Approach
- Choosing controls with the hierarchy of controls
- The Safe System Approach and survivable speeds

- How the TTM framework fits together

What the learner demonstrated

- Explains why NZ moved from a prescriptive code to a risk-based guide
- Describes the Risk Based Approach, including the hierarchy of controls and lowest total risk
- Explains the Safe System Approach and how it applies on a TTM site
- Recognises how the frameworks work together and where responsibility sits in the contracting chain

Assessment: Final knowledge check, 80% required to pass.

Assessment history

Date	Course	Assessment	Score	Result
26 Oct 2026	Working with Portable Traffic Signals	Quiz 1	90%	**Pass**
26 Oct 2026	Working Safely Near Barrier Systems	Quiz 1	50%	**Not yet**
25 Oct 2026	Working with Portable Traffic Signals	Quiz 2	60%	**Not yet**

This record lists online learning completed through Sela Skills Hub (selattm.com), operated by Sela Civil Advisory Ltd. A certificate number confirms the result has been reviewed by Sela. These courses are knowledge courses; practical competence on site is assessed separately where a course or role requires it. To verify this record, contact joseph@selacivil.co.nz.
